

Secure practically any firearm on a trunk lid

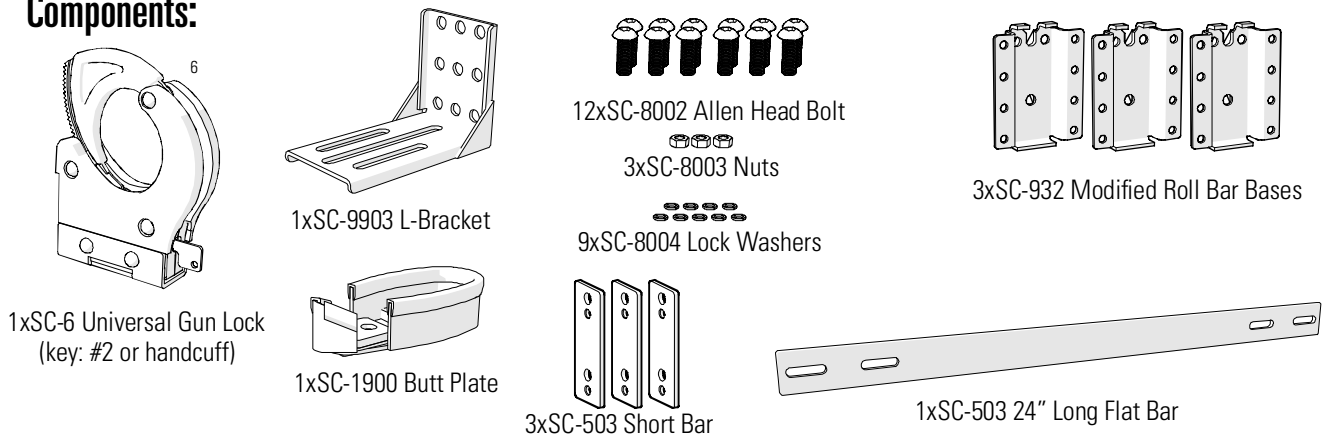

Exploded view:

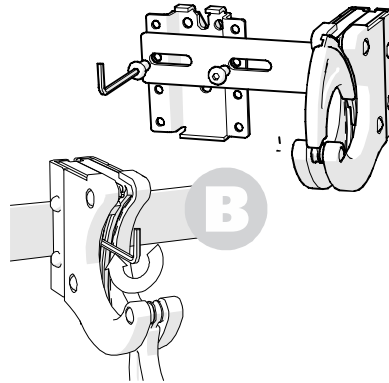

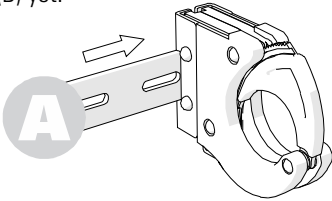

Comment: Muzzle may face any direction.
Warning: during installation continuously monitor correct position and direction of the components.

Components:

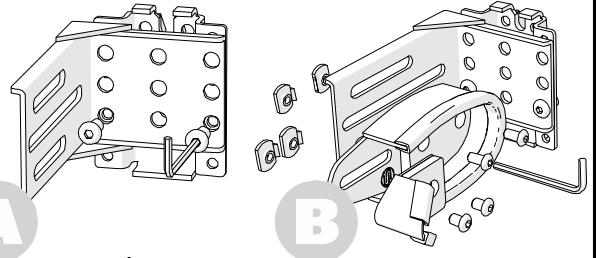

1 Install Gunlock

Install Long Flat Bar (A) (SC-503 24") onto Gunlock (SC-6), it can be secured in center position with the hidden Allan Head Bolt located on the middle of the lock; do not tighten the bolt (B) yet.

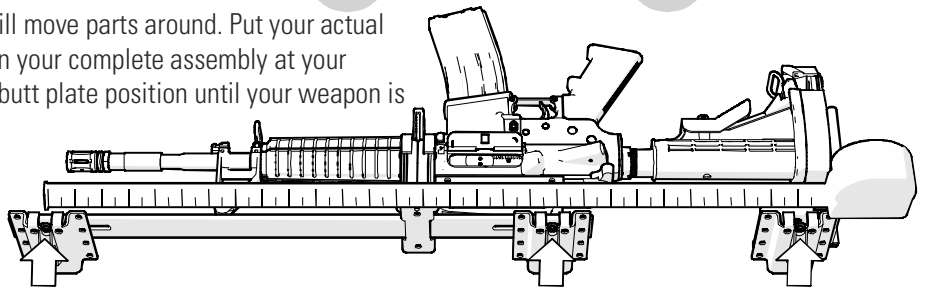

Install both ends of the Short Bar (SC-503) temporarily onto the two Modified Roll Bar Bases (SC-932).

2 Install Butt plate

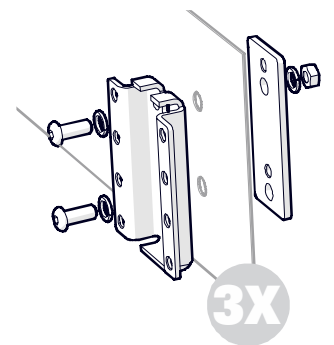

3 Adjust the parts

Slightly tighten all bolts and screws so you can still move parts around. Put your actual weapon in the gun lock and butt plate and position your complete assembly at your intended location. Adjust hinge height/angle and butt plate position until your weapon is properly lined up. If you close the ratchet arm tightly on your firearm, you will have to press or tap the outer rubber surface of the ratchet arm when deploying the firearm. Assemble the setup on the table and if the gun is in its proper position and measure the location. Keep the measurements and remove the Gunlock and the L Bracket from the 2 Bases.

5 Install Base Plates

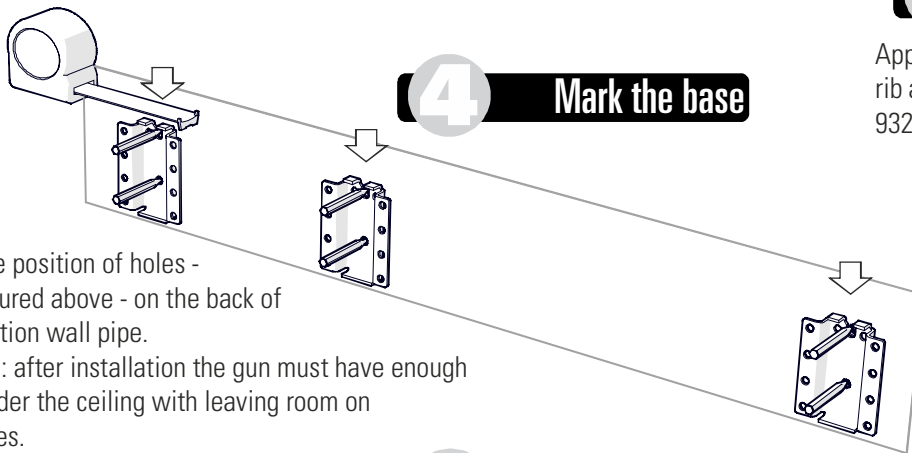

Apply Short Bars (SC-503) behind trunk lid rib and attach Modified Roll Base Base (SC-932).

4 Mark the base

Mark the position of holes - as measured above - on the back of the partition wall pipe.

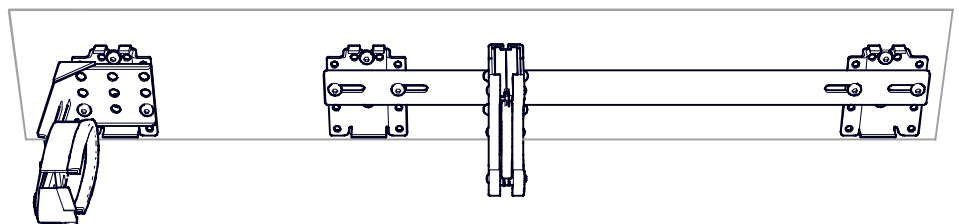

Warning: after installation the gun must have enough room under the ceiling with leaving room on both sides.

6 Assembly Elements

Install Gunlock onto Roll Bar Base (as shown in step 1) and the Long Flat Bar (as shown in step 2).

7 Tighten the Screws

Place your weapon into the setup, test and retest your installation by repeatedly inserting and removing the weapon from the assembly. When satisfied, tighten all screws and test again.
